Item Body

Dear Jim:

We will be working with EPA to collect resident mussels from historical locations within the Inner Richmond Harbor, Sante Fe Channel and Lauritzen Channel tomorrow morning. If tides and sufficient resident mussel colonies permit, we may collect from one sample location within the Parr Canal.

All samples will be accessed within the waterway area, via EPA's boat by experienced staff. We anticipate that sampling will occur between 8:30 and 11:30 tomorrow am. No shoreline access will be needed or permitted as part of this sampling effort.

Please contact me at (510) 552-8235 if I can provide additional information or if there are any questions or concerns.

Regards,

Julie Spahn
